PROFESSIONAL SUMMARY

Full-stack software engineer with hands-on experience building production-grade web applications using React, Node.js, Spring Boot, and PostgreSQL. Proficient in CI/CD pipelines, containerised deployments, OAuth2/JWT authentication, and agile delivery. Pursuing a B.Eng. in Software Engineering (Mobile & ML) at Metropolia UAS.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, Java, Python, Kotlin, HTML, CSS, Swift
Frameworks/Libraries	React.js, Next.js, Node.js, Express.js, Spring Boot, Spring WebSocket, JUnit, Jest,
Databases	MongoDB, PostgreSQL, MySQL
DevOps	Kubernetes, Docker, GitHub Actions, Jenkins, Nginx, Linux
Cloud/Tools	Git, AWS, Vercel

EXPERIENCE

Network Engineering Intern · Himont International Jun 2024 – Aug 2024

- Sustained 99%+ uptime across enterprise network infrastructure serving 100+ internal users
- Performed diagnostics and hardware maintenance across switches, routers, and access points; resolving 15+ tickets over the internship

Frontend Developer Intern · Quality Assurance Jun 2022 – Aug 2022

- Shipped 3 production frontend modules in HTML/CSS/JS, eliminating a class of UI inconsistencies across the product
- Caught and recorded 10+ pre-release bugs during QA cycles, preventing post-deployment regressions
- Crafted UI/UX assets in Figma and Adobe Suite; owned full lifecycle from wireframe through QA to deployment

PROJECTS

Synk — Startup

- Built an events and communities platform with real time in community messaging to event messaging with Spring WebSocket (Stomp), broadcasting live updates via SimpMessagingTemplate
- Implemented Stripe Connect Express with signature verified webhooks, optimistic locking, idempotent status

Personalized Study Planner

- Designed and built a full-stack SPA (64% Java backend, 34% TypeScript frontend) with Google OAuth2 + JWT auth, role-based access via Spring Security, and an Nginx-proxied REST API
- Integrated Google Calendar, SMTP email notifications, and Google Gemini AI for personalised schedule suggestions
- Packaged with Docker, containerized via kubernetes, deployed via Jenkins CI/CD, and backed by a PostgreSQL schema covering users, plans, tasks, and sessions

Cafeteria Rush Hour Simulator

- Engineered a Java/JavaFX peak-load queuing simulation using event-driven algorithms, linked lists, and time-based logic with full OOP design patterns and technical documentation
- Released full Javadoc API documentation to GitHub Pages and exported simulation output to CSV, demonstrating end-to-end engineering from design through documentation

EDUCATION

B.Eng. Information Technology — Software Engineering, Mobile Development

Metropolia University of Applied Sciences, Helsinki, Finland

Aug 2024 – Present

GCE Advanced Level · Cambridge International Examinations

2021 – 2023

LANGUAGES

English (Fluent) Urdu (Native) Hindi (Fluent) Finnish (Basic)
